

Killer Summary / Deduction Screen

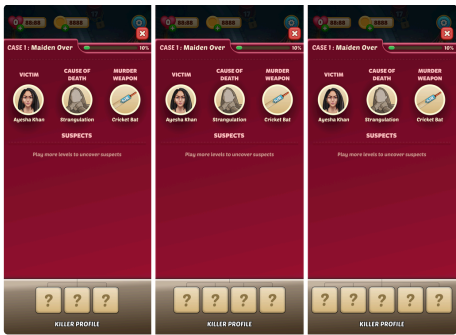

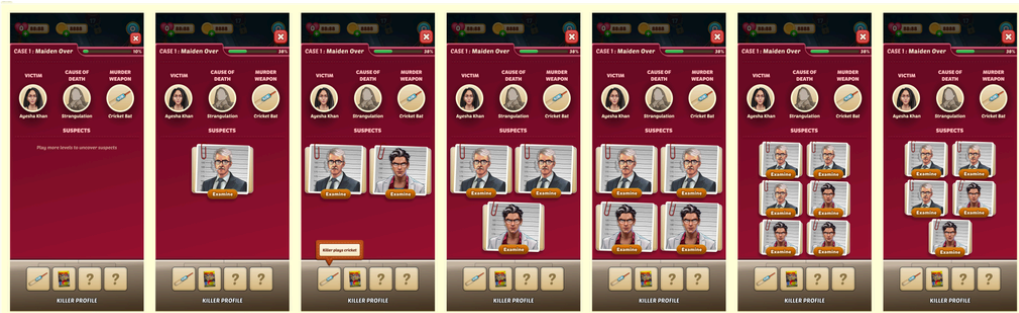

UI/UX

Figma Link: <https://www.figma.com/design/bLPaQnvzZOhMNv36K1KYWA/Crime-Mystery-Match?node-id=1694-2997&t=SJkoaLNPj12MyLLW-4>

Access Point

Player Indicator

Case Summary Screen (Crime details, Suspect list and Criminal details)

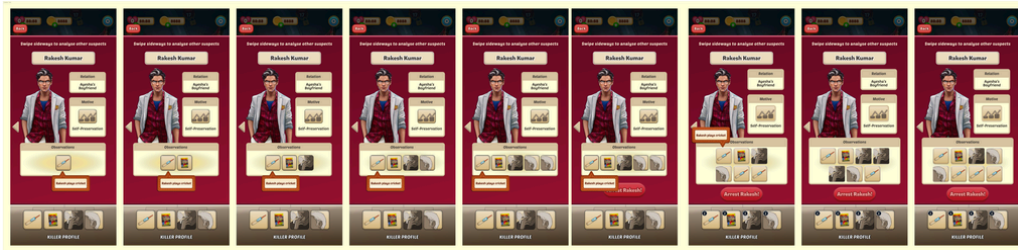

Killer profile may feature from 3-5 traits

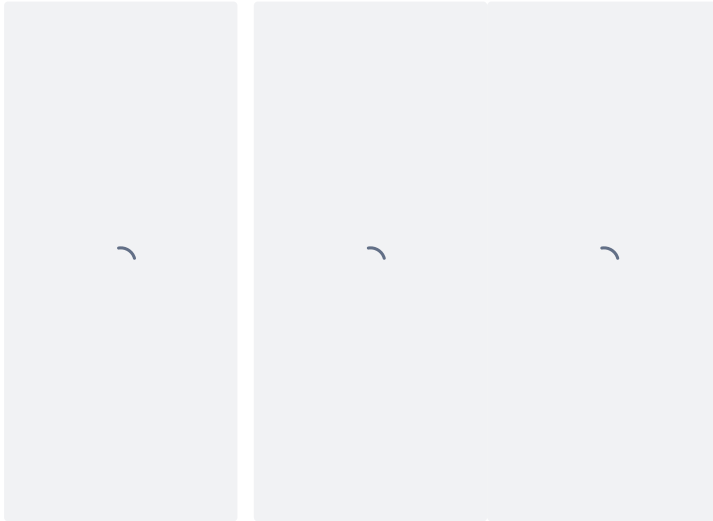

Examine button to change into Arrest Button once all clues found and arrest task is unlocked.

Individual Suspect Screen

Suspect screen having 1-8 Traits

Arrows pointing towards remaining suspects on either side

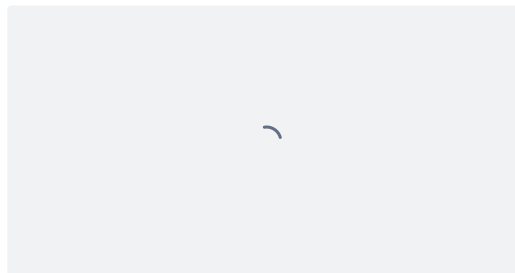

First suspect will have
arrow on right

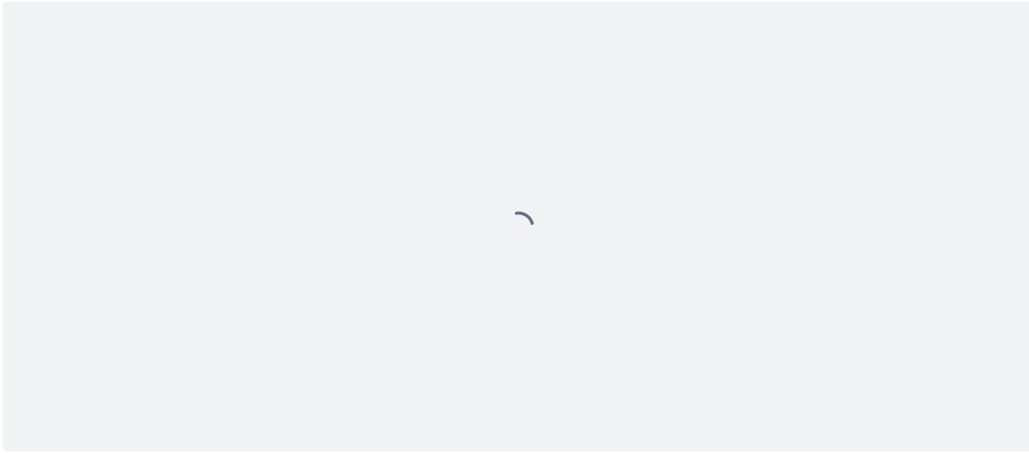

Middle suspects will
have arrow on both
sides

Last suspect will have
arrow on left

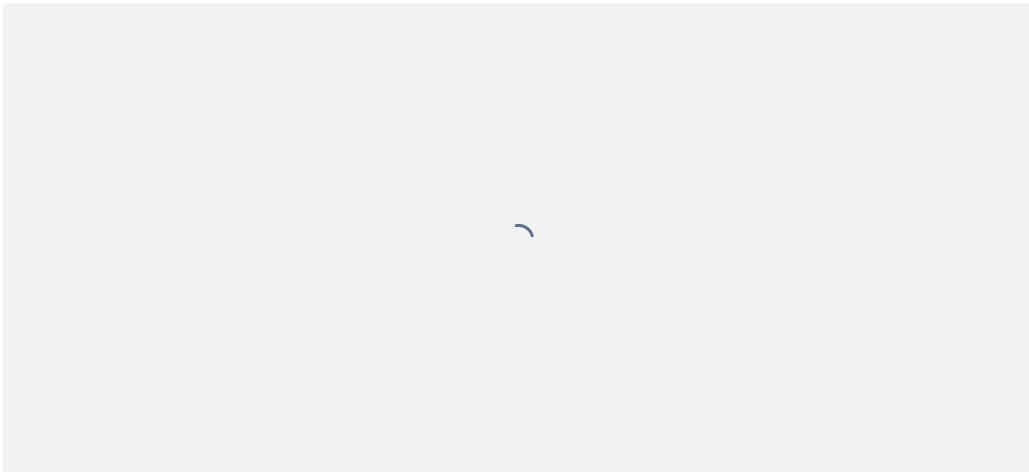

Tapping on any Observation/Suspect Trait or Killer Profile Cue/Trait will show a **tooltip** (Scale up) which will close after a few seconds (Fade out)

- Adjust pointer of the tooltip according to position and space, always pointing towards the clue
- Adjust textbox size according to text

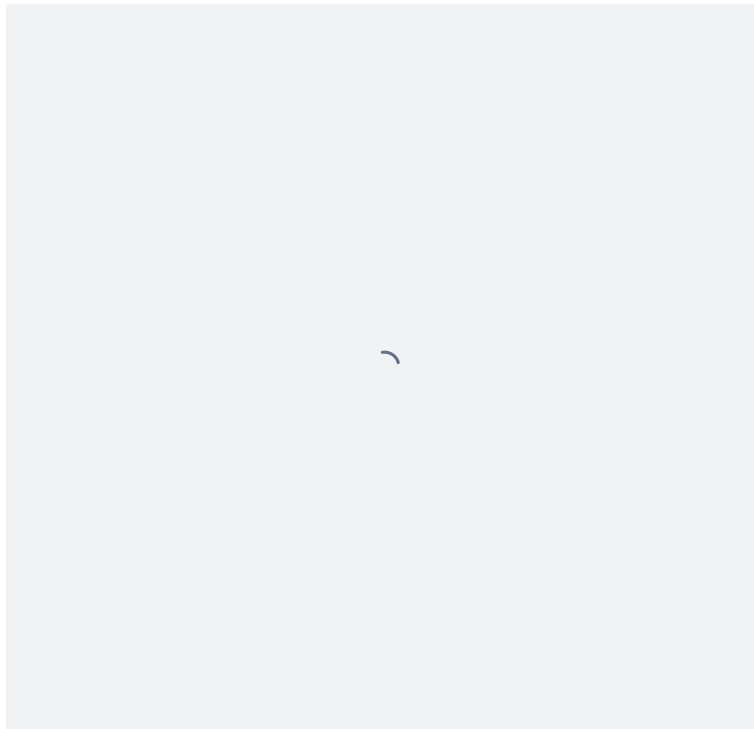

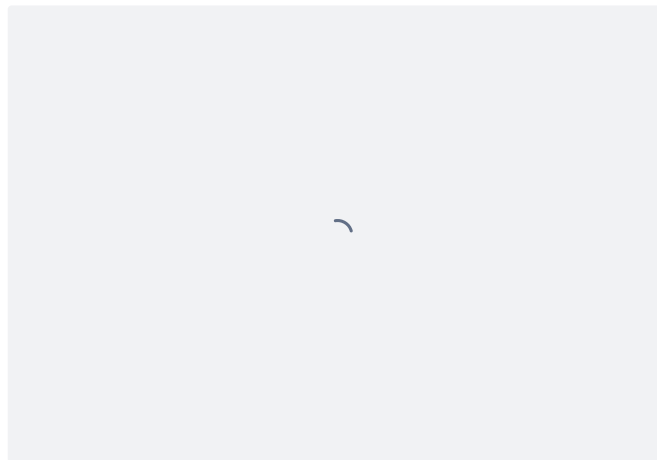

Arrest Flow

Tapping on any suspect on arrest state in case summary screen will take towards their individual screen. Further tapping on arrest button on individual screen will initiate the arrest sequence.

If all killer traits find a match in the suspect observations and the suspect has a motive, the arrest is correct, Killer found banner with fireworks will show completing the sequence and moving to narrative.

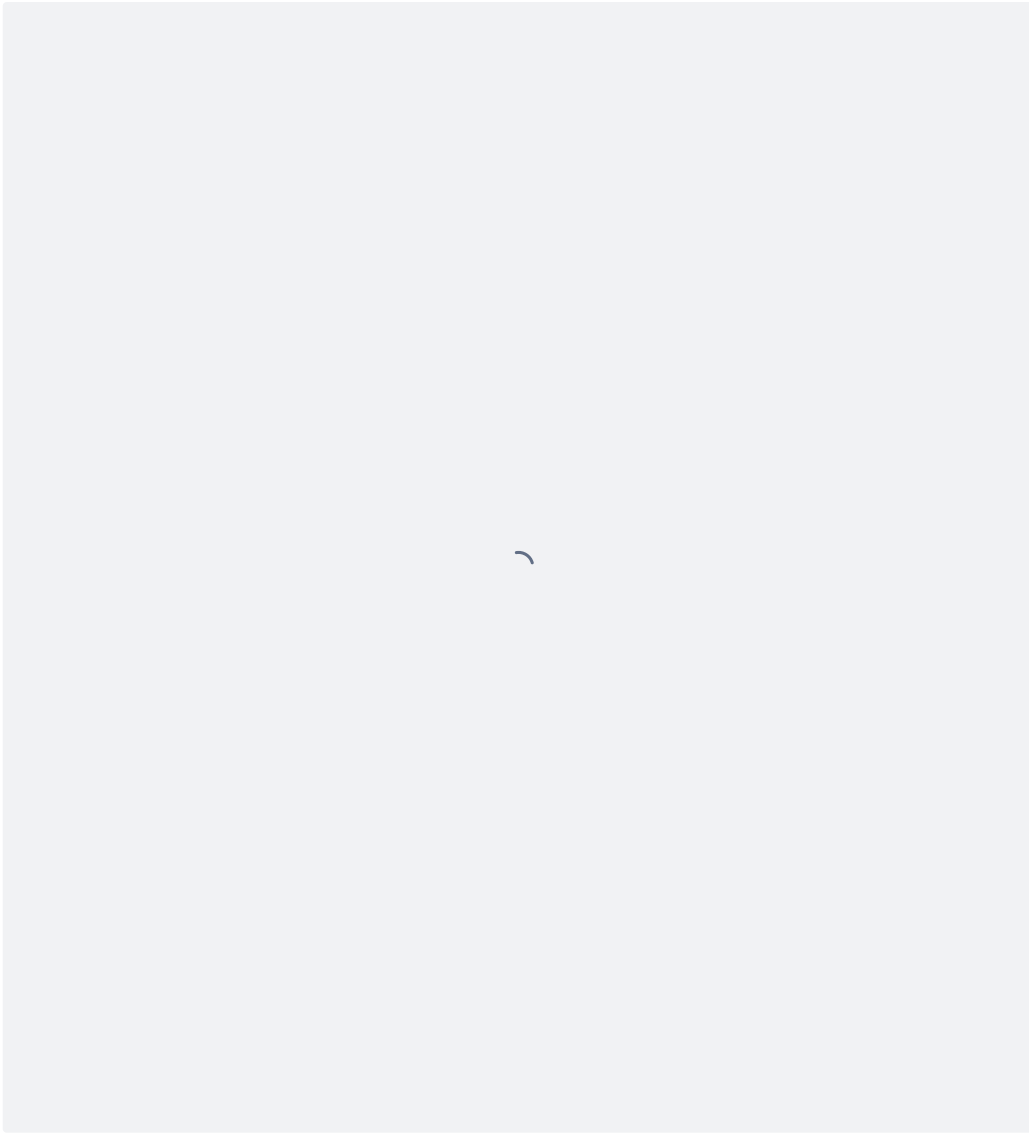

However, if any one killer trait is unmatched, the suspect is found to be not guilty (Not guilty banner) and the player is sent to the revised summary screen with the wrong arrest having a disabled button saying not guilty.

The player will have to keep arresting people until they find the Guilty.

Feedback on Arrest

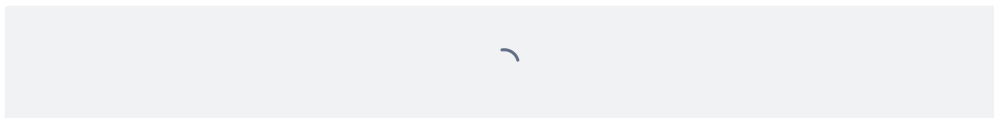

Each killer trait will be flown to corresponding cue to match or not match. Correct cues will rematched on the correct cue regardless of position in observations. Wrong cues will be matched by sequence to the unmatched observations (left to right).

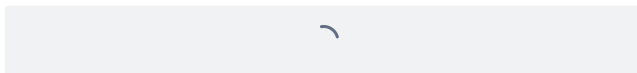

Animations

1. Banners rolling in

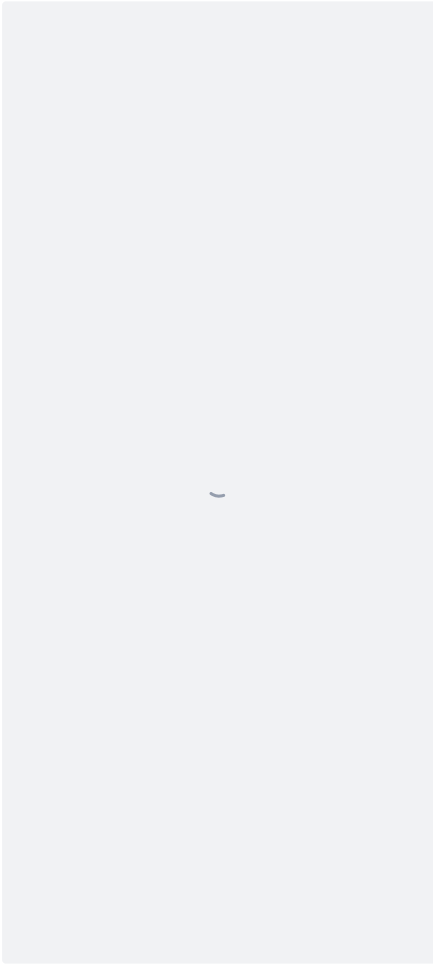

2. Examine button converting to arrest button

3. Arrest to convert to not guilty disabled button for wrong arrests

4. Matching of cues (ref to sequence below)
