

[Art Spec] Home Screen Saga Map

Mock Link: <https://www.figma.com/design/bLPaQnvzZOhMNV36K1KYWA/Crime-Mystery-Match?node-id=1600-1424&t=5EQY4EwCUDsOrLVn-4>

Prototype Link: <https://www.figma.com/proto/bLPaQnvzZOhMNV36K1KYWA/Crime-Mystery-Match?node-id=1376-1882&viewport=3622%2C-1573%2C0.24&t=GB89RBQpqeYpStxl-0&scaling=min-zoom&starting-point-node-id=1376%3A1882>

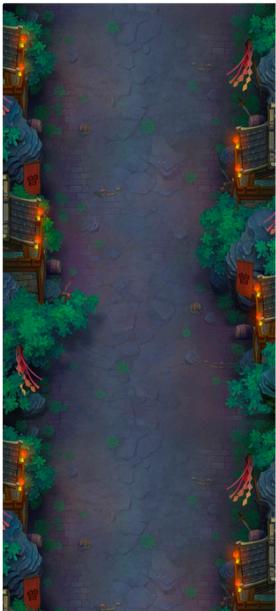

The Home Screen will be scrollable across the levels.

Background:

Tile-able background loosely representing the landscape/locale of location the chapter is based in.

- The background would be based on the POC done by @Abhishek Kumar , but would make changes on the elements to make it an Indian street, based on a UP city.
 - Colour scheme, tone etc. should be the same.
 - Art Style : Same as the one in the POC. We don't outlines like in the base game artstyle.
 - Elements on the street
 - Terraces with tv dishes, water tanks, hanged clothes
 - Shades on some of the buildings
 - Trees interspersed between buildings
 - Autos parked in the side of some buildings.
 - Street lights interspersed between buildings.
 - Can include religious buildings (But should include at least three - temple, mosque, church)

POC

As defined in the spec, elements in the side of the background should not enter the road area.

Keep BG elements in the blue area

- The background should be **tile-able vertically**. ie If two copies of the BG are placed one above each other, they should merge seamlessly.
- **Perspective:** Top Down : Not fully top view, but with the side facades slightly visible

Path:

Irregular path which can be tiled and assembled like jigsaw puzzle when placed together to make a path. There will be elements which will be arranged and assembled like hot wheels tracks to build the path which will accommodate alternating level and metal nodes.

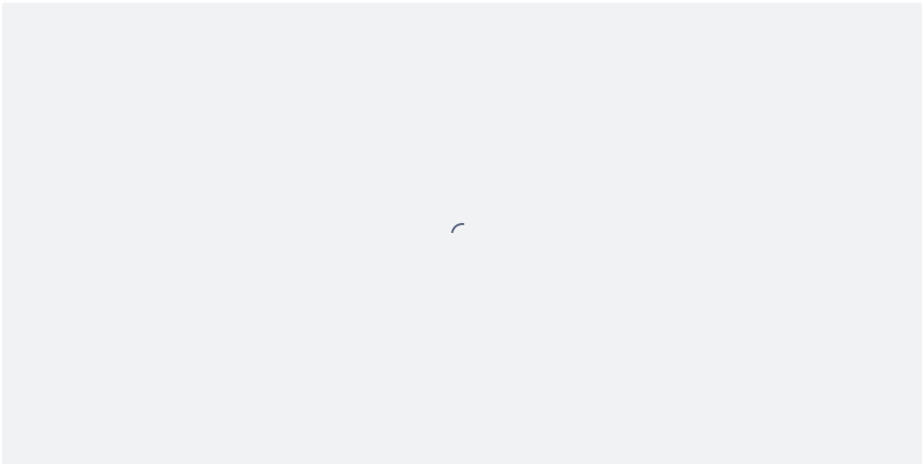

Future scope: Plot related details

Small details related to case that can be placed on BG (won't be tiled)

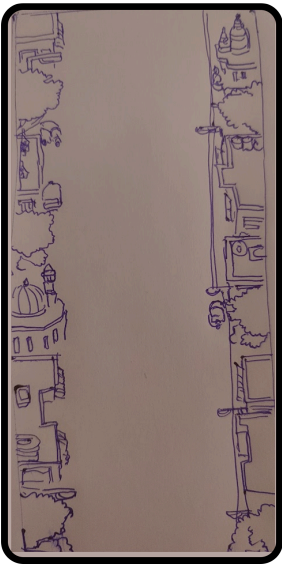

eg: A cart beside the road belonging to an eye witness, characters looking at a level node, car accident, permanent characters walking (Could be tiled)

Concept Art

References

Mock

Animations:

1. Play Button Press - Should be pressed inside like typical button behaviour
2. Tapping on Locked Nodes - Lock shake
3. New level unlock - Lock break
4. Idle Jeep Behaviour - Motor vibrate and sway side to side (**Pending** jeep concept)
5. Player Indicator Placeholder:

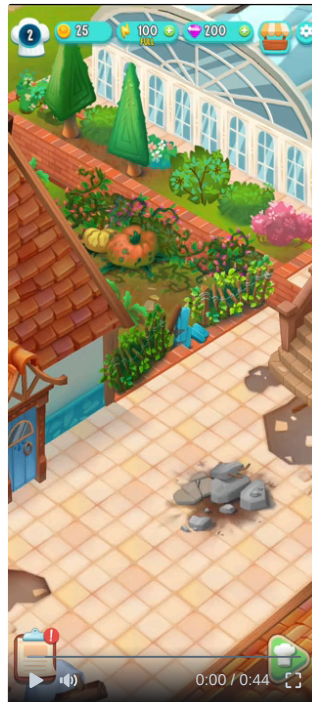

- a. Player Idle for 90 Seconds (Player Indicator Placeholder) - regularly intervals bounce sideways
- b. [Arrow for player indicator placeholder sliding out when it settles on level update](#)
- c. [Movement of player indicator placeholder along the road](#)

6. Always - Pulsating glow on active node/meta
7. 🟢 When meta task current, it needs to gently bounce in a natural pattern (bouncing in tunable regular intervals)
 - 🔴 When meta task not current - Only the first meta after current node needs to bounce once in 2 minutes [Tunable] to get attention.
8. 🟢 🟢 Active node/meta task to shake when tapped to acknowledge tap, as it opens the popup/screen transitions.
9. Tooltip open with scale up and bounce on current or first meta node after current level after player indicator has settled and stopped
10. Once meta task played - After Home Screen loads, just played meta task tooltip to close with scale down and bounce, player indicator to move on the path and update positions, once indicator is settled the next meta node will get its tooltip which will scale up with a bounce.

11. Idle - BG: Clothes hanging to dry to sway lightly similarly
12. Idle - BG: Trees swaying lightly

1. (Later) One auto/car starting up (Light switch on and vibrates) and leaves from closest edge
2. (Later requires concept art addition) To add a few hanging assets (Indian lantern/lamp/ flower hangings) which could sway.
